Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

## RESULT 1 AAX26697

AAX26697 standard; cDNA; 453 ВР

AAX26697;

18-JUN-1999 (first entry)

cDNA sequence encoding human defensin (Def-X) protein.

AIDS; immune Human defensin; Def-X; antimicrobial; antiparasitic; pesticide; cytostatic; anticancer; inflammation; tissue repair; endocrine regulation; corticostatic regulation; deficiency; psoriasis; ss. cancer; melanoma;

Homo sapiens.

The polypeptide can be used in a composition for external topical use, especially in a cosmetic composition. Compositions containing Def-X can be used for prevention and treatment of microbial and parasitic infections, especially where the microbial or parasitic infections are Gram-positive or -negative bacterial infections or mycobacterial, fungal or spirochaete infections, or where the viral infections are associated with enveloped viruses, especially HSV and HIV. The compositions can used for prevention and/or treatment of cancers, especially melanomas, or liver cancer, prostate cancer, non-small-cell lung cancer or colorectal carcinoma, and for enhancing immunity, especially in the case of AIDS, or preventing immune deficiency, inflammatory processes, especially in the case of chronic inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 a pesticide. The Def-X polypeptide can be used as a cytostatic (especially anticancer) agent, and as an agent for modulating processes of inflammation, tissue repair and endocrine (especially corticostatic)

The present sequence encodes human defensin (Def-X). The Def-X

controlled can be used as an antimicrobial, antiparasitic agent or

a pesticide. The Def-X polypeptide can be used as a cytostatic

(especially anticancer) agent, and as an agent for modulating processes

of inflammation, tissue repair and endocrine (especially corticostatic)

cregulation. The polypeptide can be used in a composition for external

containing Def-X can be used for prevention and treatment of microbial

and parasitic infections, especially where the microbial or parasitic

infections are Gram-positive or -negative bacterial infections or

mycobacterial, fungal or spirochaete infections, or where the viral

infections are associated with enveloped viruses, especially HSV and HIV.

The compositions can used for prevention and/or treatment of cancers,

cespecially melanomas, or liver cancer, prostate cancer, non-small-cell

lung cancer or colorectal carcinoma, and for enhancing immunity,

cespecially in the case of AIDS, or preventing immune deficiency,

cespecially in the treatment of psoriasis, as well as for modulating

inflammatory processes, especially in the case of Chronic inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       anticancer agent,

The Def-X CD polypeptide can be used as an antipharastic agent or CC a pesticide. The Def-X polypeptide can be used as a cytostatic cof inflammation, tissue repair and as an agent for modulating processes CC of inflammation, tissue repair and endorine (especially corticostatic) cregulation. The polypeptide can be used in a composition for external containing bef-X can be used for prevention and treatment of microbial containing Def-X can be used for prevention and treatment of microbial containing Def-X can be used for prevention and treatment of microbial containing Def-X can be used for prevention and treatment of microbial containing Def-X can be used for prevention and treatment of parasitic infections or parasitic infections or parasitic infections or parasitic infections are associated with enveloped viruses, especially HSV and HIV. The compositions can used for prevention and/or treatment of cancers, capacially melanomas, or liver cancer, prostate cancer, non-small-cell lung cancer or colorectal carcinoma, and for enhancing immunity, capacially in the case of AIDS, or preventing immune deficiency, capacially in the treatment of psoriasis, as well as for modulating inflammatory processes, especially in the case of chronic inflammatory

These were isolated from expressed sequences tags (ESTs). They can be used to stimulate cell growth, to regulate haematopoisesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemastasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g.

Gastrointestinal defensin peptide(s) - useful as antimicrobial and anti-inflammatory agents and for detecting gastrointestinal
                                  are referred to as gastrointestinal defensin peptides. Comparison of the deduced AA sequences of the defensin S cDNA with the previously reported preprodefensisn shows significant similarity. The deduced AA sequence of defensin 6 cDNA has features similar to defensin 5 and the previously reported preprodefensins. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 1993-405719/50.
                                                                                                                                                               ciones expressing new defensin related sequences were extensively characterised and found to contain genes selectively expressed in Paneth cells of the small intestin. These Paneth cell-derived defensins are designated human defensin 5 and human defensin 6 and
                                                                                                                                                                                                                                                                                                         A probe (D5' oligo) having the sequence given was used to screen a population of clones to i defensin peptides. Prof. the libraries were hu

The combination is useful as an CC array element in a microarray for monitoring the expression of a number CC of target polynucleotides. The microarray is particularly useful in the CC diagnosis and treatment of cancer and immunopathology and neuropathology. CC The microarray is useful in diagnostics and treatment regimens, drug CC discovery and development, toxicological and carcinogenicity studies, CC forensics and pharmacogenomics. The microarray is also useful for CC monitoring progression of diseases and for developing sophisticated CC profiles for the effects of currently available therapeutic drugs. The CC and genomic fragments and in research and diagnostic applications. The carray can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose carray can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose can detect changes in expression in a large number of sease coding conditions of the seases. The present sequence represents a polynucleotide control of the invention of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-10-045-180A-4 (1-19) x ACA56600 (1-452)

coultured to express a fusion peptide comprising the cationic and anionic peptides. The biologically active cationic peptide is then recovered. The vectors constructed using theses sequences encode CEME, CEMA or HNP-1 (human neutrophil peptide 1). CEMA contains the first 18 amino acids of cecropin A and the last 8 residues of melittin. CEMA is derived from CC CEME by changing the C-terminal amino acid of CEME to include two cadditional Lys residues. This modification improves the antibiotic cativity of the peptide against many bacterial species, two fold, as well as substantially enhancing its ability to permeabilise bacterial membranes of the conjunction with antibiotics to permeabilise bacterial membranes breaking down the outer membrane conjunction with antibiotics to inhibit bacterial growth and to treat an endotoxaemia or sepsis can be considered to the context of the conte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  oligonucleotides which were used in the construction of vectors used the method of the invention. The method comprises constructing an expression vector containing DNA encoding the cationic peptide adjace to DNA encoding an anionic carrier peptide which inhibits bacterial proteases. A bacterial host cell is transformed with the vector and anionic carrier peptide which the perton and the proteases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Recombinant production of antimicrobial, cationic peptide - produced in bacterial host as fusion peptide with an anionic portion for suppressing the anti-microbial activity of the cationic peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequences given in AAT33488-500 and AAT40195-204 are oligonucleotides which were used in the construction of vectors used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 2; Page 19; 90pp; English.

                                                                                                                                                                                                             The sequences given in AAT63051-64 represent oligonuclectides which were used in the construction of pGST-ppetide plasmids for the expression of HNP-1, CEME and CEMA. HNP-1 is peptide 1 from human neutrophil protein, CEME is a funion peptide made from portions of an insect defensin cercoin A and the bee venom peptide melittin, and CEMA is a variant of GEME with two additional lysine residues at the C-terminal end. The modification from CEME to CEME auses a two-fold improvement in antibiotic activity against many bacterial species as well as antibiotic activity against many bacterial species bacterial outer membranes and binding to lipopolysacharides. CEMA may be used synergistically with classical antibiotics to break down the outer membrane permeability barrier. It is possibly active against E. coli, Pseudomonas aeruginosa, E. cloacae, S. typhimurium and S. aureus.

                                                                                                                                                                                                                                                                                                                                        AAV10887-V10909 are primers used in a method which allows the productio of a novel polycationic antibacterial peptide, CEMA. This peptide is a 1s a hybrid comprising the first 18 amino acids of cecropin A and the last 8 amino acids of mellttin. It has two Lys residues at the C terminus which creates a sequence with two-fold increased antibiotic activity against many bacterial species as well as enhanced ability to permeabilise bacterial outer membranes and bind to lipopolysaccharide. CEMA can be used to treat bacterial infections and septic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                13

                                                                                                        The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614
                                                                                                                                                                                                                                                                                                                                                                                                                                                    MetArgThrLeuThrLeuLeuSerAlaPheLeuLeuValAlaLeuGlnAlaTrpAla 19

probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acide expressed in the human lung; measuring the array with a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung comprising (a) algorithmically predicting at least one exon from genomic sequences of the array; identifying exons in a eukaryotic genome, comprising (c) having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single exon probe, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several tissues and/or cell types using hybridisation to a single exon in several caspove and (b) measuring the expression of each of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single exon in the probe are used for gene of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene of 12011 sequences, mentioned in the specification, or encoded by the cypobes/open reading frames (ORF). The probes are used for gene of 12011 sequences, mentioned in the specification, or encoded by the cypobes, interestitial lung disease (ILD), familial indiopathal and for the study of lung disease. (CODP), interestitial lung disease (ILD), familial lung disease (I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of the printed specification, but was obtained in electronic format directly from WIPO at

Identifying gene signatures in 3'-directed human cDNA library - for diagnosis of abnormal cell function, by preparing cDNA that reflects relative abundance of corresp. mRNA in specific human tissues

Claim 1; Page 2003; 2245pp; Japanese

A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences of given in AAT1901-T26837 and which is able to phybridise to part of human genomic DNA, cDNA or mANA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared C from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-entented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. C The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different cell types.

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense coligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with cartivating peptide factors and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, contral nervous system (CNS) and peripheral nervous and non-nervous system receptors, adenosine receptors, brandykninh receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (specially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy (ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vises principles (RP), pain, cystic fibrosis (CP), allergic rhinitis (AR), pulmonary transplantation rejection; pulmonary infections, bronchitis, and antisense oligonucleotides used in the exemplification of the present human polymodenties. Disclosure; Page 218; 1592pp; English the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 2, A

Patent No. 5641497

Patent No. 5641497

GENERAL INFORMATION:

APPLICANT: Bevins, Charles L.

APPLICANT: Bevins, Charles L.

APPLICANT: Bevins, Charles L.

TITLE OF INVENTION: Gastrointestinal Defensin Peptides,

TITLE OF INVENTION: GASTROINTESTINAL SEQUENCES: 51

CORRESPONDENCE ADDRESS:

ADDRESSED: Woodcock Washburn Kurtz Mackiewicz and No. 5641497ris

STREET: One Liberty Place - 46th Floor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3406 ATGAGGACCCTCACCTCTCTGCCTTTCTCCTGGTGGCCCTTCAGGCCTTGAGGA 3462

Center project Information
Center clone name: 830-561b17
Center clone name: 830-561b17
Center clone name: 800-561b17
Sequencing vector: pUC18; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 127999 bases at least Q40
Consensus quality: 128930 bases at least Q30
Consensus quality: 128544 bases at least Q20
Quality coverage: 11.05x
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Web site: http://genome.imb-jena.de/

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No.:
 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                  Sequence Quality Assessment:
This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part
of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /notes = mingle stranded/single chemistry region" 56028. 56165 /notes = mingle stranded/single chemistry region" 5752. .58060 /notes = mingle stranded/single chemistry region" /notes = mingle stranded/single chemistry region"

It currently consists of 3 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 2 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
